

MainTable

| Emp_code | BasicPay | TotalAddition |
|----------|----------|---------------|
| 160 | 3000 | 200 |
| 161 | 4000 | 100 |

If I run the query and pass the empcode=160 ... I will get the Addition table

```

SELECT trx_amount,[desc],emp_code
--SELECT *
FROM emp_additions EA
INNER JOIN Additions_types AT ON EA.Trx_Type = AT.ID
WHERE
(trx_period >= '2011-01-01 00:00:00.000' AND trx_period <= '2011-01-31 00:00:00.000') AND
emp_code=160

```

Additions Table

| trx_amount | desc | emp_code |
|------------|-----------|----------|
| 100 | Bonus | 160 |
| 100 | Transport | 160 |
| 20 | Bonus | 161 |
| 30 | Transport | 161 |
| 50 | Food | 161 |

My output grid should be like this

| Emp_code | Basicpay | Bonus | transport | Food | TotalAddition(total of additions) |
|----------|----------|-------|-----------|------|-----------------------------------|
| 160 | 3000 | 100 | 100 | 0 | 200 |
| 161 | 4000 | 20 | 30 | 50 | 100 |
